

1.3 WHAT IS EPOCAST 36?

EPOCAST 36 is the registered trade name of the modern pourable epoxy resin chocking system developed and manufactured by H.A. Springer GMBH, and distributed worldwide. Is a two-component pourable chocking compound with excellent physical characteristics replacing the conventional method of steel chocks when used for mounting main and auxiliary engines, gear boxes, steering gears, thrust bearings, stern tubes, etc. EPOCAST 36 chocks are not only economical to fit but offer additional benefits such as their ability to fill any reasonable irregularity in the chocking interface and to reduce noise and vibration.
